List & Label – A Universal Tool for Craftsmanship Reporting

When it comes to the woodworking industry, you don't only need strong arms, efficient machines and entrepreneurship. You also need to be able to process information efficiently. Daniel Wagner and his company schreinerservice24 offer software solutions that assist carpentry workshops, booth builders and shop fitters in their preparatory work in a variety of ways. As a reporting tool, List & Label provides first-class services and his customers can benefit in many ways, e.g. from customized stock lists that fit their individual needs.

The Company

Since 2009, the trained master carpenter Daniel Wagner, in conjunction with his company schreinerservice24 (literally translated: carpenterservice24), has been developing software solutions for the woodworking industry. Working together with several partner companies, he mainly develops individual interface solutions. In addition to tailored software solutions, he also offers shop solutions. Due to his industry knowledge, he is naturally able to put himself in his customer's shoes, which means that they can speak the same language when it comes to defining their software requirements.

The Challenge

For his software applications, Daniel Wagner needed a flexible reporting tool that made it possible to create various stock lists that the users could customize according to their needs using the design interface. At first, Daniel Wagner used Microsoft's "SQL Server

Facts

Organization:
schreinerservice24 GmbH

Sector: Software manufacturer

Location: Berlin

**Web:** www.schreinerservice24.de

Challenge: Develop shop and material management solutions, enabling the use of the formula editor independently from the application and flexible design of the output data.

Solution: List & Label in the Enterprise Edition

Success: Flexible software solutions for the woodworking industry with customizable material lists and offers.
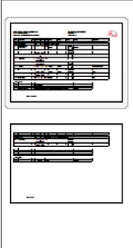

Reporting Services" to achieve this. However, it was not an ideal solution. According to him, the application lacked "elegance and, above all, an end user report designer". When choosing the right development tool, it was important for him that the component could be used in the most varied scenarios, meaning it should be able to work universally. In the end, the key factor was that the report generator had to be from a proven manufacturer with in-house support.

The Solution

Daniel Wagner found what he needed in the List & Label reporting tool offered by combit: "It had the required universality and in all other aspects, the tool lived up to my expectations. I was able to integrate the component easily." But in order to get the most of the many possibilities this tool has to offer, he did some extra tweaking. Daniel Wagner was happy with the two weeks it took to thoroughly learn to use the tool: "The effort is well worth the benefit," he concluded.

schreinerservice24's applications are being developed for Windows in Visual Studio Professional and use List & Label in various ways. Mostly, the report generator can be used to create stock lists that the user can customize according to his own needs with the design interface. With an additional software application, interior developers have the possibility to make their furniture available using a shop configurator. There are many adjustable parameters for furniture. "Due to this, the shop solution had to be as flexible as our customer's furniture," said Daniel Wagner. Now, the furniture manufacturers can personalize the settings and adjust the configuration interface. In order to store various

digital logic units that react dynamically to the user's input, schreinerservice24 uses the formula editor that is also available independently from List & Label in the Enterprise Edition. Daniel Wagner is enthusiastic about this possibility: "This way the user doesn't have to deal with two different formula wizards, but can use the same wizard for both List & Label and the configurator." In the shop solution, List & Label is also used to create offers. "Here the report designer also is of vital importance, as our users want to be able to design the offer interface freely," said Daniel Wagner.

Whenever he had questions on how to use List & Label, Daniel Wagner felt he was always on solid foundations with combit: "The support team is competent and reliable, especially when asking for help by phone. They helped right away, without putting the customer off."

Summary

schreinerservice24 has found the perfect reporting tool in List & Label. The manager, Daniel Wagner, says that the strengths of this tool are its flexibility, the uncomplicated integration, the "straightforward, user-friendly report designer" and its compatibility with the most varied data sources. List & Label has opened many new doors for him. "The designer in particular makes it possible for the end customer to adjust many things himself," he praises and concludes: "We started out with the Professional Edition of List & Label and have recently upgraded to the Enterprise Edition. That means that we are counting on List & Label for our reporting needs today and will continue to do so in the future. The reasons are obvious: as a manufacturer, combit is highly competent, friendly and professional!"
